DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 1-13 are, drawn to “*detecting monitor*”, classified in class 445 , subclass 33.
- II. Claims 14-17 are, drawn to “*image display*”, classified in class 345, subclass 1.1 .
- III. Claims 18-22 are, drawn to “*hardware drivers for flat panel display*”, classified in class 345, subclass 204 .

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I has separate utility such as monitoring a first node of a connector, asserting a first output signal... and receiving the first output signal... . The subcombination has separate utility such as a connector having a pin..., a signal detect portion, a flat panel display driver... .

Art Unit: 2673

Inventions Group I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I has separate utility such as monitoring a first node of a connector, asserting a first output signal... and receiving the first output signal.... The subcombination has separate utility such as detecting a flat panel display..., negating an enable signal and generating a system interrupt.

Inventions Groups II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because as a connector having a pin..., a signal detect portion, a flat panel display driver.. . The subcombination has separate utility such as detecting a flat panel display..., negating an enable signal and generating a system interrupt.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
